

Printpal offers custom cut-contour sticker printing.

The stickers can be any shape and any size, just indicate the shape you need with a vector path made with the CutContour swatch, exactly like the pink line on the circle to the right. You can find CutContour in the Swatches panel, or you can lift it directly from the line provided. Make sure the path is only 1pt thick, has no fill, and sits on a layer above all your artwork.

Be aware that the cut-contour needs to have a bleed and safety area both of 3 mm.

The CutContour path needs to be created in Adobe Illustrator in order to work properly. If need be, we can create the CutContour for you, however a Design Charge will be incurred.
